

LD BRAIN — KNOWLEDGE CAPTURE

Raghav

Linkd Prints & Vhagar — Principal

PREPARED BY	Mahesh Gavhane — LD Brain Build Team
DATE	April 2026
ESTIMATED TIME	45–60 minutes

GAPS CLOSED BY THIS QUESTIONNAIRE

V1–V8, L4, L5, L7, L8, L9, L10, C4

Why this questionnaire? The LD Brain is being built as the group's central intelligence system — everything we know about revenue, customers, operations, and strategy in one place. Your answers to these questions will close 14 open knowledge gaps across Vhagar and Linkd. The more specific your answers, the sharper the brain's analysis will be.

Gaps this closes: V1, V2, V3, V4, V5, V6, V7, V8, L4, L5, L7, L8, L9, L10, C4

SECTION A — VHAGAR PERFORMANCE DATA

We have the live Shopify store, product catalog, and pricing. We need the numbers behind it.

A1. Revenue since launch (monthly) Pull from Shopify Analytics → Overview → filter by month from Day 1. We need:

- Total GMV (gross sales) per month
- Net revenue (after returns + discounts) per month
- Number of orders per month
- Average order value per month

If you don't have this ready, just share the number: what is the total revenue Vhagar has done since launch? Round number is fine as a starting point.

A2. Repeat purchase rate — the north star metric From Shopify → Customers → returning customer rate. Or just your gut estimate:

- What % of customers who bought once have come back for a second purchase?
- Do you know of any customers who've bought 3+ times?
- What's the average gap between first and second order (for those who return)?

A3. Return rate breakdown We know overall return rate is <10%. But we need more:

- Which products or sizes are generating the most returns?
- What are customers saying when they return? (Fit? Quality? Colour mismatch?)
- Is the return rate getting better or worse as you release new drops?

A4. Fit feedback — structured data This is blocking the fit-lock sprint and the vertical integration story.

- Do you have any structured feedback on fit? (Reviews, DMs, WhatsApp messages from customers)
- Which size is causing the most fit complaints — S/M/L/XL?
- Which garment type has the best fit feedback? Which has the worst?
- Has any customer said "perfect fit" in a review or message? If yes, what was the product?

A5. Marketing spend and attribution

- What is the total marketing spend since Vhagar launched? (Approximate is fine)

- Which channels are you running: Meta (Instagram/Facebook)? Google? Influencers? WhatsApp?
- What does the agency handle vs what do you manage directly?
- What is the rough ROAS (return on ad spend) — i.e., for every ₹1 spent on ads, how many ₹ in sales?
- Have you tried organic (SEO, reels, influencer gifting)? Any results?

A6. Agency setup

- Who are the agencies or freelancers currently working on Vhagar? (Names, what they handle)
- What are you paying each of them? (Monthly retainer or % of spend)
- What does each agency own? (Content? Ads? Shopify management? All three?)
- Are you happy with current agency performance or looking to change?

A7. Discount strategy — needs a decision The live site shows 45–65% "off" on almost every product, plus a sitewide 15% code, plus "Buy 3 save 10%". This is structurally risky for a brand trying to move upmarket to ₹2,500+.

- Is this a temporary launch-phase tactic with a planned end date, or open-ended?
- What are the actual MRPs based on? (Were those realistic prices you intended to charge, or set high to make discounts look deeper?)
- Have you modeled what happens to repeat purchase rate if you raise to real prices? Or is the plan to run on discounts through FY26?
- What do Rare Rabbit, Snitch, or your reference brands do on discounting?

A8. Vhagar unit economics (one SKU deep-dive) Pick your best-selling shirt. Tell us:

- What does that shirt cost to make at Cotton? (Cutting + stitching + finishing per piece)
- What fabric goes into it — from Silk? How many meters per shirt? What's the transfer price?
- Does Linkd print that fabric? If yes, what's the Linkd rate for it?
- What is the total COGS (cost of goods sold) per shirt?
- What does it sell for (net, after discount + returns)?
- What is the gross margin on that shirt?

This single SKU exercise will unblock gap V4 and become the template for every Vhagar SKU.

SECTION B — LINKD POLICY DECISIONS

These are decisions only you can make. They are currently undocumented.

B1. Silk ↔ Linkd inter-company rate The brain shows Silk sends ~15.2 lakh mtrs/year to Linkd at ₹36.75/mtr. We don't know if this is:

- A formal decision (Raghav + Dilip agreed ₹36.75 = break-even rate) or
- An informal number that drifted in without a policy

Questions:

- Was ₹36.75/mtr a deliberate rate or did it just happen?
- Who decided it? Is it documented anywhere?
- Should Silk be charged at break-even, at a slight margin, or at Book B1 market rate (₹45.97)?
- How often is this rate reviewed?

B2. Cotton ↔ Linkd inter-company rate Currently Cotton is charged ₹35–40/mtr. Market rate for external customers doing same width = ₹28/mtr. Cotton is paying 25–43% above market.

- Why is Cotton charged above market rate for Linkd printing?
- Who set this rate and when?
- Is Dilip aware of this discrepancy? Has it been raised?
- Should this be corrected? If yes, to what rate?

B3. Capacity allocation rule When Linkd is at full capacity (which will happen as Book B2 grows), who gets priority?

- Book A Silk gets priority? Or first-come-first-served?
- If a Book B2 brand client is willing to pay ₹60/mtr but Silk has a job queued — what happens?
- Is this written anywhere, or is it ad-hoc?

B4. Price floor Currently the rate card sets the floor. But there's no written rule for:

- Fusing-only rate floor (KAIVALYA DIGIHOUSE is at ₹9 — is ₹9 the floor or can it go lower?)
- Calendar-only jobs — is there a minimum?
- Bulk discount threshold — at what volume does a customer deserve a rate negotiation?
- Who can approve below-floor pricing: only you, or also Mahesh?

B5. Amarson International Amarson is Linkd's #2 customer at ₹89.4L (and also Silk's #3 at ₹1.75 Cr).

- What exactly does Linkd do for Amarson? (Jobwork on their own fabric? Or does Linkd supply fabric + print?)
- Who from Amarson do you deal with?
- Is this relationship at risk? Or locked in?

B6. Book B2 pipeline The NBD hire for Linkd was in progress as of April 2026.

- Has the NBD hire happened? If yes, who joined?
 - If not, where are you in the process?
 - Do you have any Book B2 prospects in conversation right now? (Names, stage, estimated volume)
 - What is the biggest thing blocking Book B2 growth: no sales person? No brand awareness? Price?
-

SECTION C — VHAGAR × COTTON PRODUCTION SHARE

C1. What % of Cotton's capacity is currently being used by Vhagar?

- How many pieces per month is Vhagar currently ordering from Cotton?
- What is the rough split: Vhagar orders vs external Cotton orders in a typical month?
- Is there a formal production schedule or is it ad-hoc?
- Does Cotton have a confirmed order book from Vhagar for the next 30/60/90 days?

After answering, please send responses to Mahesh. Answers will be entered into the LD Brain and gaps will be marked closed.
